

bloom

The living market for fresh commodities

SELLING PROPOSITION

Bloom is the first B2B auction platform that combines the price-discovery speed of a Dutch clock auction with verifiable AI quality scoring and instant logistics integration — turning a quayside phone call into a transparent, mobile-first trade completed in under 60 seconds.

\$23M Rooser raised in one round	EUR 4.5B+ FloraHolland annual trade	60 sec Target lot clearance time	94% Target clearance rate

ABOUT THIS CONCEPT

Is Bloom a real platform?

What I invented

The name 'Bloom' and the specific combination of features described here are a **conceptual synthesis** created for this trendwatching report. Bloom does not currently exist as a company or product.

What already exists

Every building block is real: FloraHolland's clock auctions (since the 1990s), Rooser's seafood B2B platform (\$23M raised, 2022), Auctelia's fresh produce digital auctions (Belgium), Source.ag's AI quality data, Foresightee's attempt (discontinued).

The white space

No single platform currently combines clock auctions + AI grading + logistics integration + Bloomberg-style market intelligence across multiple fresh commodity categories. That gap is the opportunity.

UNIQUE SELLING PROPOSITIONS

Six reasons to build Bloom

Each USP is inspired by a proven pattern from an existing platform — the innovation lies in combining them for fresh commodity markets.

1

60-second clock auction

Descending Dutch clock with configurable floor. First bid wins. Matches FloraHolland speed for any commodity — no slow negotiation.

2

AI freshness score

IoT sensor telemetry and supplier history generate an objective quality grade per lot. Buyers trust what they cannot touch.

3

Bid-to-ship in one flow

Winning a lot triggers cold-chain logistics automatically. No second system, no phone call — settlement and transport in one action.

4

Market intelligence layer

Historical price curves, seasonal benchmarks and live comparables per origin and grade. The Liv-ex model for every fresh category.

5

Auto-bid algorithms

Set a max price, grade threshold and weekly volume. Bloom bids overnight arrivals automatically — Bloomberg order entry for lettuce.

6

Trader reputation engine

Two-way ratings after every transaction. Public freshness consistency scores for sellers. Payment speed scores for buyers.

From harvest to sold in four steps

01 LIST

Seller uploads a lot with harvest data, sensor quality score, origin certificate and logistics availability. The AI freshness score is auto-generated from IoT telemetry and historical supplier performance.

02 CLOCK

The descending Dutch clock opens. Price starts at the seller's maximum and drops every second. The first buyer to press 'bid' secures the lot at the live price — matching the FloraHolland model.

03 SETTLE

The winning bid triggers automatic invoice generation, payment initiation and cold-chain logistics booking. The entire post-auction workflow is completed without a single phone call.

04 DATA

The transaction feeds the market intelligence layer: price, quality grade, origin, buyer and seller ratings all contribute to the live benchmark data visible to all participants.

CROSS-SECTOR INSPIRATION MATRIX

Every feature has a proven precedent

Bloom feature	Inspired by	Existing platform	Maturity
Clock auction format	Descending price clock	Royal FloraHolland (since 1990s)	Very high
AI freshness score	IoT sensor data + ML grading	Source.ag (CEA growers)	Medium-high
Bid-to-ship logistics	Integrated post-bid workflow	Rooser (seafood, 2022)	Medium
Market price intelligence	Historical index + live benchmarks	Liv-ex (fine wine, 2000)	Very high
Auto-bid algorithms	Automated order entry	Bloomberg Terminal / ICE	Very high
Trader reputation engine	Two-way mutual ratings	eBay (consumer, 1996)	Very high
Loyalty credits	In-platform currency + referrals	Airbnb (2008+)	Very high
Provenance trail	Digital lot passport	Christie's / fine wine sector	High

TARGET MARKET

Who needs Bloom most?

Primary: Fresh produce packers & traders	Secondary: Wholesale buyers (retail, foodservice)	Tertiary: Data & logistics ecosystem
Companies like Frescura Group that pack and sell fresh fruit and vegetables. They need faster price discovery, less phone-based negotiation and transparent market rates. Currently under-served by digital tools.	Supermarket procurement teams, restaurant chains and food processors who buy large volumes daily. They need reliable quality guarantees, automated re-ordering and a single platform replacing multiple supplier calls.	Cold-chain logistics providers, IoT sensor vendors (Source.ag), certification bodies and fintech settlement providers. Bloom creates a marketplace they can plug their services into via open APIs.

COMPETITIVE POSITIONING

The landscape Bloom would enter

Platform	Category	Clock auction	AI quality	Logistics	Market data
Royal FloraHolland	Flowers	Yes	Partial	Partial	Yes
Rooser	Seafood	No	Yes	Yes	Partial
Auctelia	Fresh produce	Yes	No	No	No
Liv-ex	Fine wine	No	No	No	Yes
Foresightee	Fresh produce	Yes	No	No	No
BLOOM (concept)	Multi-category	Yes	Yes	Yes	Yes

The white space is real.

No single platform currently combines all four layers for fresh commodities. Bloom is a concept. The market gap it describes is not.

Rooser · Auctelia · Source.ag · Royal FloraHolland · Frescura Group
